-!- FUNCTION: Binds to sodium channels and inhibits the inactivation of the activated channels; thereby blocking neuronal transmission. This toxin is active only on insects.

-!- SUBCELLUAR IOCATION: Secreted.

-!- TISSUE SPECIFICITY: Expressed by the venom gland.

-!- SIMILARITY: BELCNGS TO THE ALPHA/BETA-SCORPION TOXIN FAMILY.

ALPHA-TOXIN SUBFAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ProDom; PD003908; ScErpton toxinL; 1.

                                                                                                                                                                   Bur. J. Neurosci. 11:975-985(1999).

-!- FUNCTION: Binds to sodium channels and infibits the inactivation of the activated channels, thereby blocking newronal transmission.
-!- SUBCELLULAR LOCATION: Secreted.
-!- TISSUE SPECIFICITY: Expressed by the venom gland.
-!- MASS SPECIFICITY: WM-7287.96; MW-8FR-0.37; METHOD-Electrospray.
-!- SIMILARITY: BELONGS TO THE ALPHA/BETA-SCORPION TOXIN FAMILY.
ALPHA_TOXIN SUBFAMILY. ALPHA-LIKE TOXIN SUBCLASS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            SEQUENCE FROM N.A.

J. Blochem. 269:3920-3933(2002).

FUNCTION Bands to sodium channels and inhibits the inactivation of the activated channels, thereby blocking neuronal transmission. This toxin is highly toxic to insects and mice, and inhibits the birding of alpha-toxin to cockroach neuronal membranes.

SubCELLULATY: Expressed by the venom gland.

FISSUE SPECIFICITY: Expressed by the venom gland.

                                                                                                                                                                  -!- FUNCTION: Binds to sodium channels and inhibits the inactivation of the activated channels, thereby blocking neuronal transmission. This toxin induces a slow, depressant, flaccid paralysis on fly larvae. It is active only on insects.
-!- SUBCELLULAR LOCATION: Secreted.
-!- ISUE SPECTICITY: Expressed by the venom gland.
-!- SIMILARITY: BELOWGS TO THE ALPHA/BETA-SCORPION TOXIN FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    13 SerCysLeuPheGly-----AsnGluGlyCysAsnLysGluCysLysSerTyr
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  FUNCTION: Binds to sodium channels and inhibits the inactivation of the activated channels, thereby blocking neuronal transmission
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      "Amino acid sequence of 2 neurotoxins from the scorpion Buthus eupeus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sodium channel inhibitor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Buthus eupeus (Lesser Asian scorpion) (Mesobuthus eupeus).

              --- FUNCTION: Binds to sodium channels and inhibits the inactivation of the activated channels, thereby blocking neuronal transmission. Active on both insects and mammais but competes for alpha-toxins binding only on cockroach sodium channels.
--- SUBDNIT: Monomer.
--- SUBCELLULAR LOCATION: Secreted.
---- TISSUE SPECIFICITY: Expressed by the venom gland.
---- MISCELLANBOUS: LD (50) is 50 mg/kg by intracerebroventricular injection into mice.
---- SIMILARITY: BELOWGS TO THE ALPHA/BETA-SCORPION TOXIN FAMILY.
ALPHA-TOXIN SUBFAKILY. ALPHA-LIKE TOXIN SUBCLASS.

Heliomycin is a polycysteine peptide with antifungal and antibacterial activity, isolared from the leptide with antifungal and antibacterial activity. Contain the sequence given in AAY5478. The heliomycin peptides contain the sequence given in AAY5478. The heliomycin peptides are used as pharmaceuticals for treating or preventing fungal infections in himans and animals. They may also be used as antifungal agents for plant protection. Nucleic acid encoding the heliomycin peptides is used to generate transgenic plants that are resistant to some fungil and because the parterial specifically Cercespora beticola, Cladusporium herbarum, busature culmonum, F. oxysporium and Phytophinora cinnamonil, and for recombinant production of the peptides.
                                                                                                                               New polycysteine peptides, designated heliomycin, with antifungal or antibacterial activity, useful in medicine or plant protection
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Antifungal, antibacterial; fungicide; heliomicine; human medicine; veterinary medicine; plant protection; bacterial infection;

                                                                                                                                                                                                                                      The present invention relates to peptide derivatives of heliomicine with antifungal and/or antibacterial activity. The present sequence is one such peptide. The peptides are useful in human and veterinary medicine and in plant protection, for control of bacterial and fungal infections. An antifungal and/or antibacterial composition containing at least one
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           20

derived from the Mat apparation (MF-alphal) and hellomyon. The attachment of the MF-alphal sequence to the N-terminal aids secretion of the Hellomycin is a polyoyteteine peptide with antifungal and antibacterial activity, isolated from the leplodopteron Hellothis virescens. Hellomycin peptides contain the sequence given in AAY54378. The hellomycin peptides are used as pharmaceuticals for iterating or preventing fungal infections in humans and animals. They may also be used as attifungal agents for plant protection. Nucleic acid encoding the hellomycin peptides is used to generate transgenic plants that are resistant to some fungi and bacteria (specifically F. oxysporum and Phytophthora cinnamoni), and for recombinant production of the peptides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             26 GluCysLysArgArgGlyTyrLysG.yGlyH.sCysGlySerPheAlaAsnValAsnCys 45

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Synthetic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ABB76895;
```

```
The present invention relates to peptide derivatives of heliomicine with antifungal and/or antibacterial activity. The present sequence is one such peptide. The peptides are useful in human and verexinary medicine and in plant protection, for control of bacterial and fungal infections. An antifungal and/or antibacterial composition containing at least one peptide is also claimed.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1 GATAAGCTTATCGGTTCCTGCGTGTCGGGTGCTGTGAACTACCCATTGCCAATTGCAACGGT

                                                                                                                                                                                                                                                                                                      The present invention relates to peptide derivatives of heliomicine with antifurgal and/or antibacterial activity. The present sequence is one such peptide. The peptides are useful in human and vererinary medicine and in plant protection, for control of bacterial and fungal infections. An antifurgal and/or antibacterial composition containing at least one peptide is also claimed.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   21 GlucysLysArgArgGlyTyrLysGlyGlyHisCysGlySerPheAlaAsnIleAsnCys 40

                                                                                                                                                                                                                                                                                                                                                                                    ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention relates to peptide derivatives of heliomicine with antifungal and/or antibacterial activity. The present sequence is one such peptide. The peptides are useful in human and veterinary medicine and in plant protection, for control of bacterial and fungal infections. An antifungal and/or antibacterial composition containing at least one peptide is also claimed.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention relates to peptide derivatives of heliomicine with antifungal and/or antibacterial activity. The present sequence is one such peptide. The peptides are useful in human and veterinary medicine

The present sequence is one such peptide. The peptides are useful in human and veteritary medicine and in plant protection, for control of bacterial and fungal infections. An antifungal and/or antibacterial composition containing at least one
and in plant protection, for control of bacterial and fungal infections. An antifungal and/or antibacterial composition containing at least one peptide is also claimed.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    GATAAGCTTATCGGTTCCTGCGTGTGGGGTGCTGTGAACTACACTTCCGATTGCAACGTT

The present invention relates to peptide derivatives of heliomicine with antifungal and/or antibacterial activity. The present sequence is one such peptide. The peptides are useful in human and veterinary medicine and in plant protection, for control of bacterial and fungal infections. An antifungal and/or antibacterial composition containing at least one
                                                                                                                                  9

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention relates to peptide derivatives of heliomicine with antifungal and/or antibacterial activity. The present sequence is one such peptide. The peptides are useful in human and veterinary medicine and in plant protection, for control of bacterial and fungal infections. An antifungal and/or antibacterial composition containing at least one peptide is also claimed.

The present invention relates to peptide derivatives of hellomicine with antifungal and/or antibacterial activity. The present sequence is one such peptide. The peptides are useful in human and vecerinary medicine and in plant protection, for control of bacterial and fungal infections. An antibungal and/or antibacterial composition containing at least one peptide is also claimed.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    1 GATAAGCTTATCGGTTCCTGCGTGTGGGGTGCTGTGAACTACACTTCCGATTGCAACGGT

The present sequence represents a fusion peptide of the tobacco PR-lalpha signal peptide and hellomycin. The attachment of the CPR-lalpha sequence to the N-terminal aids secretion of the heliomycin peptide. Hellomycin is a polytysteine peptide with antifungal and antibacterial activity, isolated from the lepidopteron Heliothis virescens. Heliomycin peptides contain the sequence given in AAY5478. The heliomycin peptides are used as pharmaceuticals for treating or preventing fungal infections in humans and animals. They may also be used as antifungal agents for plant protection. Nucleic acid encoding the heliomycin peptides is used to generate transgenic plants that are resistant to some fungi and bacteria (specifically Cercospora beticola, Cladosporium herbarum, Fusarium culmorum, production con the peptides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         61 GAGTGCAAGAGGAGGGTTACAAGGGTGGTCACTGCGGTTCCTTCGCTAACGTGAACTGC 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             20
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention relates to peptide derivatives of heliomicine with antifungal and/or antibacterial activity. The present sequence is one such peptide. The peptides are useful in human and veterinary medicine and in plant protection, for control of bacterial and fungal infections. An antifungal and/or antibacterial composition containing at least one peptide is also claimed.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         GATAAGCTTATCGGTTCCTGCGTGTGGGGTGCTGTGAACTACACTTCCGATTGCAACGGT
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New peptide derivatives of heliomicine, useful as antibacterial and antifungal agents in human or veterinary medicine and agriculture.

Zhang J.-H., Hua Z.C., Zhu D.X.;
"Cloning of anti-neuroexcitation peptide III (ANEP) cDNA from Scorpion
Buthus martensii Karsch.";
Submitted (MAR-2000) to the EMBJ/GenBank/DDBJ databases.
-!- FUNCTION: Binds to sodium channels and inhibits them.
-!- SUBCELLULAR LOCATION: Secreted (By similarity).
                                                                                                                                                             SEQUENCE FROM N.A. TISSUE-Venom gland. Biochemistry 33:11135-11149(1994).

Confidence of the activated channels, thereby blocking neuronal transmission.

Subcellular LOCATION: Secreted.

TISSUE SPECIFICITY: Expressed by the venom gland.

ETALLARTY: BELONGS TO THE ALPHA/BETA-SCORPION TOXIN FAMILY.

PIR, A55869, A55869.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  49

-!-FUNCTION: Binds to sodium channels and inhibits the inactivation of the activated channels, thereby blocking neuronal transmission. This toxin is active only on insects.
-!-SUBCELLUIAR LOCATION: Secreted.
-!-TISSUE SPECIFICITY: Expressed by the venom gland.
-!-SIMILARITY: BELONGS TO THE ALPHA/BETA-SCORPION TOXIN FAMILY.
ALPHA-TOXIN SUBFAMILY:

"Characterization of scorpion alpha-like toxin group using two new
toxins from the scorpion Leiurus quinquestilatus hebraeus.";
Eur. J. Blochem. 269:3220-3933 (2002).
PUCTION: Binds to sodium channels and inhibits the inactivation
of the activated channels, thereby blocking neuronal transmission.
This toxin is highly toxic to insects and mice, and inhibits the
binding of alpha-toxin to cockroach membranes.
SUBCELLUIAR LOCATION: Secreted.
TISSUE SPECIFICITY: Expressed by the venom gland.
MISCELLANBOUS: LD(56) is 34.3 nmol/kg to cockroaches (Blatella
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     28 GlyGlyThrGlyGlySisCysGlyPheLysLeuGlyH.sGly:leAlaCysTrpCys 46

≿
```

```
--- FUNCTION: Binds to sodium channels and inhibits the inactivation of the activated channels, thereby blocking neuronal transmission. Has paralytic activity in mice.
--- SUBCELLULAR LOCATION: Secreted.
--- TISSUE SPECIFICITY: Expressed by the venom gland.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               TCCTGCGTGTGGGGTGCTGTGAACTACACTTCCGATTGCAACGGTGAGTGCAAGAGAAGG

Submitted (JUL-2003) to the PDB data bank.

-!- FUNCTION: Binds to sodium channels and inhibits the inactivation of the activated channels, thereby blocking neuronal transmission. Active on both insects and mammals but competes for alpha-toxins binding only on cockroach sodium channels.
-!- SUBMINIT: Monomer.
-!- SUBCELLULAR LOCATION: Secreted.
-!- TISSUE SPECIFICITY: Expressed by the venom gland.
-!- MISCELANEOUS: LD [50] is 50 mg/kg by intracerebroventricular injection into mice.
-!- SIMILARITY: BELONGS TO THE ALPHA/BETA-SCORPION TOXIN FAMILY.
ALPHA-TOXIN SUBFAMILY. ALPHA-LIKE TOXIN SUBCLASS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            31 GlyGlyThrSerGlyHisCysGlyPheLysValGlyHisGlyLeuAlaCysTrpCys 49
                                                                                                                                                                                                                                                                                                                                                                                                                        Toxin; Neurotoxin; Ionic channel inhibitor; Sodium channel inhibitor;
Amidation; 3D-structure.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
